The Honorable Tom Carper, Chairman
U.S. Senate Committee on Environment and Public Works
513 Hart Senate Office Building
Washington, DC 20510

The Honorable Shelley Moore Capito, Ranking Member
U.S. Senate Committee on Environment and Public Works
170 Russell Senate Office Building
Washington, DC 20002

Dear Chairman Carper and Ranking Member Capito,

As a leader in providing high-quality and affordable water and wastewater services in the state of Texas, The Texas Water Company (TWC) works daily to protect the families and communities we serve from the dangers posed by Per- and polyfluoroalkyl substances (PFAS). TWC provides critical services to 84,000 people in Texas and has an exceptional record of compliance with federal and state health and environmental regulations. Our nearly 100 employees are proud to be part of the communities they serve and are eager to continue providing high-quality water service.

TWC strongly believes that passive receivers of PFAS, particularly those providing public services and who neither manufacture nor use PFAS, should not be subject to liability under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) for PFAS releases so long as all applicable rules and regulations were followed. Water and wastewater utilities like TWC have been at the forefront of protecting public health and the environment by proactively treating for PFAS, all at a significant expense. Because these public services are funded by the families who use them, this means that the brunt of these clean-up costs are being borne by people other than those who created the PFAS crisis.

TWC commends the Environmental Protection Agency (EPA) for attempting to right this wrong by holding polluters accountable by designating PFOA and PFOS as hazardous substances under CERCLA. Unfortunately, without Congressional action to protect water and wastewater customers from CERCLA liability hundreds of millions of Americans will be exposed to even greater costs to clean up a problem they did not create.

CERCLA is based on the principal that parties responsible for contamination should pay for its remediation, known colloquially as “polluters pay.” The producers, manufacturers and parties that used PFAS chemicals in their operations are all clearly responsible parties. Water and wastewater systems and their customers are clearly not.

EPA Administrator Regan has stated in testimony before Congress that the agency does not intend to seek clean up costs from water and wastewater utilities for PFAS under CERCLA. While TWC appreciates this sentiment, it is not binding on future administrations. More importantly, this enforcement discretion cannot protect water and wastewater systems from being named in a private cause of action or being brought into an EPA enforcement action by a potentially responsible party in order to dilute their liability. The legal fees and liability exposure from these near certainties will have far-reaching impacts on utility budgets and customer rates.

Only Congress can provide the protection water and wastewater systems require to keep providing clean, safe water and wastewater services at reasonable rates.

Moreover, the EPA’s proposed maximum contaminant levels for certain PFAS means that the only entities with a legal requirement to remove those PFAS from the environment would be water systems (again, with the bulk of those costs being borne by customers). It would be wholly inequitable to direct water utilities to clean up a problem they did not create while at the same time exposing their customers to potentially billions of dollars of liability when the filters used to remove PFAS are disposed of. Congress must take action to protect these innocent parties by enacting an exemption from CERCLA liability for the disposal of PFAS filters by water and wastewater systems.

TWC strongly urges you to pass a CERCLA exemption for all water and wastewater systems to protect customers from having to pay twice for PFAS cleanup.

Sincerely,

Aundrea Williams

Aundrea Williams
President, The Texas Water Company
