April 20, 2016

The Honorable James Inhofe  
Chairman  
Committee on Environment and Public Works  
U.S. Senate  
Washington, D.C. 20510

The Honorable Barbara Boxer  
Ranking Member  
Committee on Environment and Public Works  
U.S. Senate  
Washington, D.C. 20510

Dear Chairman Inhofe and Ranking Member Boxer,

I write on behalf of the over 11,000 men and women of the American Nuclear Society to express our support for S. 2795, the Nuclear Energy Innovation and Modernization Act.

It is becoming increasingly clear that the U.S. and the world will need to significantly expand nuclear generating capacity in the coming decades to address growing energy demands while reducing emissions of greenhouse gases.

Expanded federal engagement in advanced, non-light-water nuclear research and development is critical to achieving these overall objectives. The Nuclear Energy Innovation and Modernization Act would assist the development of advanced nuclear reactor technologies by modernizing the licensing regime to support private investment in advanced reactor technologies.

Historically, the U.S. has led the world in developing new reactor technology. However, several other nations, including Russia and China, have moved aggressively to develop innovative Generation IV reactors which offer distinct advantages over current designs.

The U.S. must recommit itself to improving its advanced reactor technology portfolio in order to ensure future access to abundant clean energy and to maintain its influence over global nuclear safety and nonproliferation norms. This legislation, if enacted, would provide much-needed support toward those objectives.

Sincerely,

Eugene S. Grecheck  
President  
American Nuclear Society

CC: Senator Corey A. Booker  
Senator Mike Crapo  
Senator Sheldon Whitehouse
