UNITED STATES SENATE ENVIRONMENT AND PUBLIC WORKS HEARING

"Strengthening Public Health Protections by Addressing Toxic Chemical Threats"

Linda Reinstein
Asbestos Disease Awareness Organization (ADAO)
President/Co-founder and Mesothelioma Widow

Wednesday, July 31, 2013

I would like to thank Chairman Boxer, Ranking Member Vitter and the entire EPW committee for the honor and opportunity to testify at this hearing, "Strengthening Public Health Protections by Addressing Toxic Chemical Threats." I know far too well that toxic chemicals are not just "threats." They are a very real part of the life and death of many people, including my husband.

My name is Linda Reinstein. I am neither a lobbyist nor an attorney. I am a mesothelioma widow and Co-founder of the Asbestos Disease Awareness Organization (ADAO). Founded in 2004, ADAO is the largest independent non-profit organization in the U.S. dedicated to preventing exposure to eliminate asbestos-caused diseases.

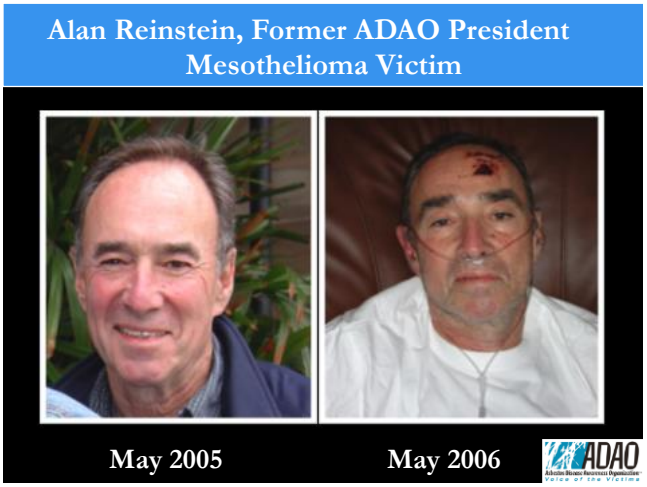

Since EPA Deputy Administrator John R. Quarles testified about the "Need for Toxic Substances Act"[1] in 1975, science and technology have advanced exponentially. Asbestos, a human carcinogen, has caused one of the worst man-made disasters in history. The facts are irrefutable, yet, each day, 30 Americans die from a preventable asbestos-caused disease.

Honoring our ADAO tradition, I'd like to dedicate my testimony today to two asbestos victims, Janelle and Michael. Tragically, last month, Janelle lost her life to mesothelioma at the age of 37, leaving behind her husband and 11-year-old son. Michael, a 29-year-old mesothelioma patient, continues to fight for his life and faces limited treatment options. Neither Janelle nor Michael ever worked with asbestos. The asbestos victim's profile has changed; once a blue-collar worker in his mid-sixties, now there is a new, younger patient profile emerging with no known occupational exposure – people like Janelle and Michael. It is no longer only at-risk workers being diagnosed; it's also their families: children who hugged their parents and spouses who washed their clothes.

MES-O-THE-LI-O-MA – CAN'T PRONOUNCE IT – CAN'T CURE IT

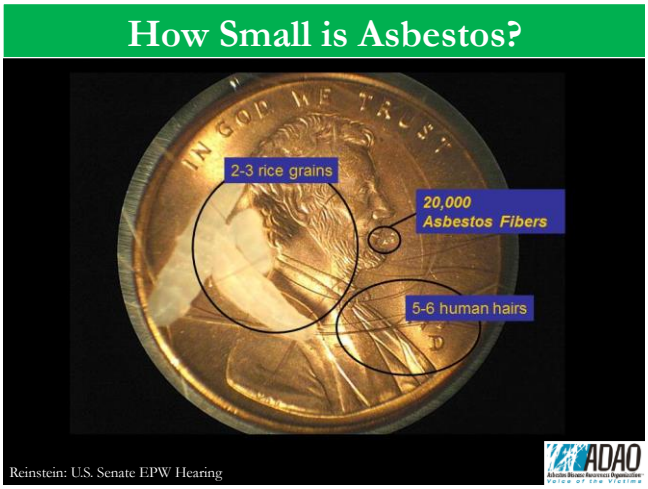

My husband, Alan, was diagnosed with pleural mesothelioma in 2003. We had never heard of the asbestos-caused cancer, mesothelioma, and shortly learned it was incurable. Alan chose to have an extrapleural pneumonectomy, a radical surgery which removed a rib and his left lung, stripped off his pericardium and surgically replaced his diaphragm – all in hopes of more time with us. In 2005, the cancer came back on his remaining lung. Alan felt like he was breathing through a pinched straw, every breath, every minute, every day. When his oxygen levels became critically low, he was tethered to supplemental oxygen. He fought a hard battle with chemotherapy for nearly a year. In 2006, Alan took his last breaths with our then 13-year-old daughter and me by his side. Alan paid the ultimate price for his job – his life. Our daughter was only ten years old when we began our arduous family battle to fight mesothelioma and work with Congress to ban asbestos.

Today, I somberly represent Alan, Janelle, Michael and hundreds of thousands of other victims whose voices have been silenced by asbestos. I use the word "victim" because it is the only word that appropriately describes an individual exposed to asbestos; a patient, living or deceased, who was diagnosed with an asbestos-related disease; or a family member of those exposed or diagnosed. For each life lost, a shattered family is left behind.

FROM MAGIC MINERAL TO DEADLY DUST

Asbestos was once considered a "magic mineral" due to its light weight, tensile strength, heat resistance, and low cost. All six types of asbestos – chrysotile, amosite, crocidolite, tremolite, anthophyllite, and actinolite – are carcinogenic. Asbestos fibers can be nearly 700 times smaller than a human hair and are odorless, tasteless, and indestructible. All forms of asbestos can cause mesothelioma and lung, gastrointestinal, laryngeal, and ovarian cancers, as well as non-malignant lung and respiratory diseases.

The World Health Organization[2], International Labor Organization[3], U.S. Environmental Protection Agency[4] and Surgeon General[5] all agree that there is no safe level of exposure to asbestos. Asbestos-related diseases are often misdiagnosed and under-reported. Exacerbated by a latency period of 10–50 years, late stage diagnosis often limits patients' treatment options. Most patients die within 6–12 months after diagnosis. Each death is preventable.

[5] http://www.surgeongeneral.gov/news/2013/04/pr20130401.html

Most Americans trust that their air, soil and water are safe from toxic contaminants; however, the Toxic Substances Control Act (TSCA)[6] has failed to protect public health and our environment. In 1989, the EPA issued a final rule under Section 6 of TSCA, banning most asbestos-containing products. In 1991, however, this rule was vacated and remanded by the Fifth Circuit Court of Appeals. As a result, most of the original ban on the manufacture, importation, processing, or distribution in commerce of asbestos-containing products was overturned.

There were only five asbestos-containing products banned by TSCA in 1976:

1. Corrugated paper
2. Rollboard
3. Commercial paper
4. Specialty paper
5. Flooring felt

We cannot identify the toxic asbestos fibers nor manage the risk in products or places.

ASBESTOS: STILL LEGAL AND LETHAL IN THE UNITED STATES

Asbestos is still legal and lethal in the United States. The asbestos industry put profits before people -- dollars before lives.

The collateral damage of asbestos consumption is staggering. The U.S. Geological Survey (USGS) reported that from 1900 to 2012, we have produced or used more than 31 million tons[7] and imports continue. Ships docked in U.S. ports still unload asbestos in the states of Louisiana, Texas, California and New Jersey.

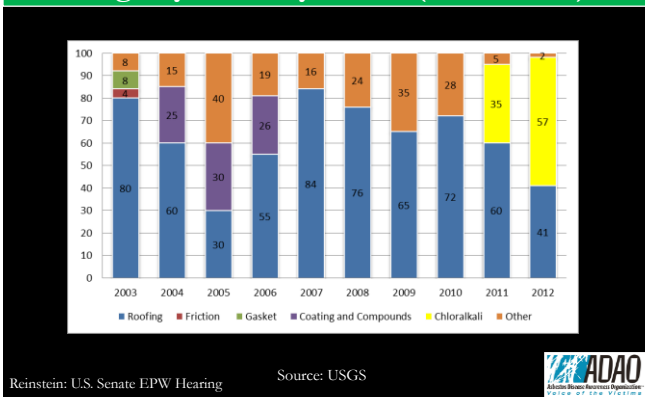

The United States remains dependent on imports to meet so-called manufacturing needs. USGS reported that in 2012, asbestos consumption in the "United States was estimated to be 1,060 tons. […] The chloralkali industry accounted for an estimated 57% of U.S. consumption; roofing products, about 41%; and unknown applications, 2%."[8] For the past two years, we have seen an increase in asbestos consumption in the chloralkali industry, even though viable and affordable asbestos substitutes exist.

In 2012, the US imported all of the chrysotile asbestos from Brazil, the world's third largest asbestos producer.

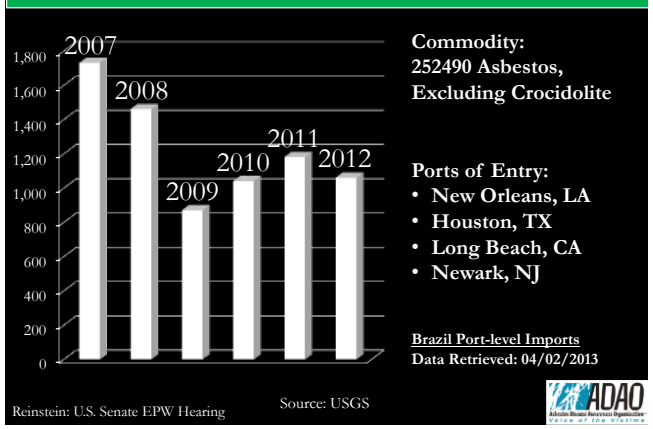

In response to this continued public health crisis, 18 months ago, I began my inquiry about the toxic asbestos import trade by asking three questions via a Freedom of Information Act request:

- Who are the U.S. companies and/or government agencies importing asbestos?

Percentage of U.S. Imported Asbestos Usage by Industry Sector (2003 – 2012)

U.S. Asbestos Consumption and Ports of Entry

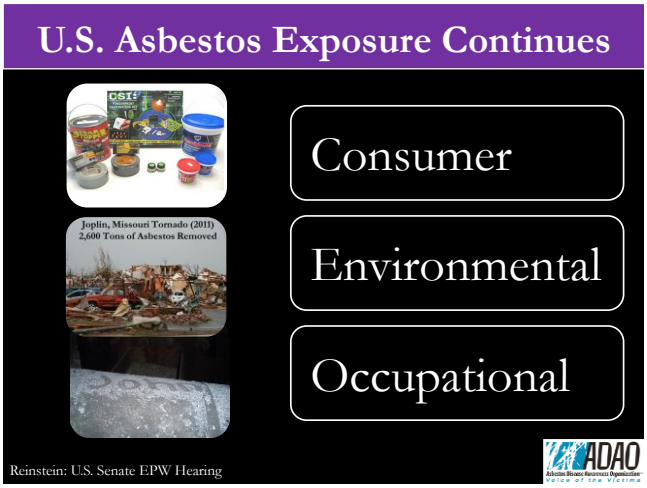

[6] http://www.epa.gov/oppt/newchems/pubs/chem-pmn/appendix.pdf
[7] http://pubs.usgs.gov/circ/2006/1298/c1298.pdf
[8] http://minerals.usgs.gov/minerals/pubs/commodity/asbestos/mcs-2013-asbes.pdf

- What asbestos-containing products are being manufactured in the U.S.?
- Where are the asbestos-containing products being used in or exported from the U.S.?

I have been unable to get answers to any of my questions due to U.S. Code Title 13, Chapter 9, Section 301(g), which protects the confidentiality of export data collected by the U.S. Census Bureau. This roadblock led me to different questions: Why is the United States "dependent on imports to meet manufacturing needs," as USGS states?

According to the Center for Public Integrity, the American Chemistry Council released a statement saying, "Diaphragms made of asbestos are a critical separation medium in the chlorine manufacturing process. Chlorine is essential for manufacturing life-saving medicines, producing solar cells, and providing safe drinking water." The statement asserted that chlorine producers "work to manage the risks and potential adverse effects to human health and the environment" and "workers potentially exposed to asbestos are protected by wearing appropriate personal protective equipment and following strict work processes."[9]

Despite the irreversible, harmful health effects of asbestos exposure, the American Chemistry Council statement continues: "Employees in the chlor-alkali industry are given annual medical examinations to determine whether an employee has incurred any adverse effects due to any possible exposure." If a medical examination results in an asbestos-disease diagnosis, the health effects are irreversible.

We have ignored the WHO Resolution stating: "The most efficient way to eliminate asbestos-related diseases is to stop using all types of asbestos."

ASBESTOS CAN TAKE YOUR BREATH AWAY, FOREVER

The facts are clear: the tons of asbestos that have been mined in and imported to the U.S. have created a public health crisis. Asbestos remains in our homes, schools, and buildings, and even on consumer shelves. Workers and consumers cannot adequately identify the toxic fibers nor manage the risks of consumer, environmental and occupational asbestos exposure in products or places.

Do you know where these nearly invisible, deadly fibers are in your home, in your car, on consumer shelves, or here on The Hill?

Consumer, environmental and occupational exposure continues.

CONSUMER EXPOSURE:

- In 2007, ADAO identified 5 consumer products, including a child's toy, that were contaminated with asbestos.

[9] http://www.publicintegrity.org/health/public-health/asbestos

- In 2012, a colleague of mine sent me a mitt that was made of 97% chrysotile asbestos.

ENVIRONMENTAL EXPOSURE:

- Natural and man-made environmental disasters have plagued us. It was reported that 2,600 tons of asbestos was collected after the Joplin, Missouri tornado and tons of toxic debris littered the coastline after Hurricane Sandy.

- W.R. Grace Vermiculite Mine, a man-made disaster in Libby, MT, has been costly in dollars and lives. The federal government has spent more than $450 million to remediate the toxic areas in Libby, MT and treat the residents.

OCCUPATIONAL EXPOSURE:

Although we have laws and regulations, workers are still being exposed on the job and take-home exposure threatens their families with deadly hugs and chores. Occupational exposures can occur during maintenance, construction, abatement, and hazardous debris removal.

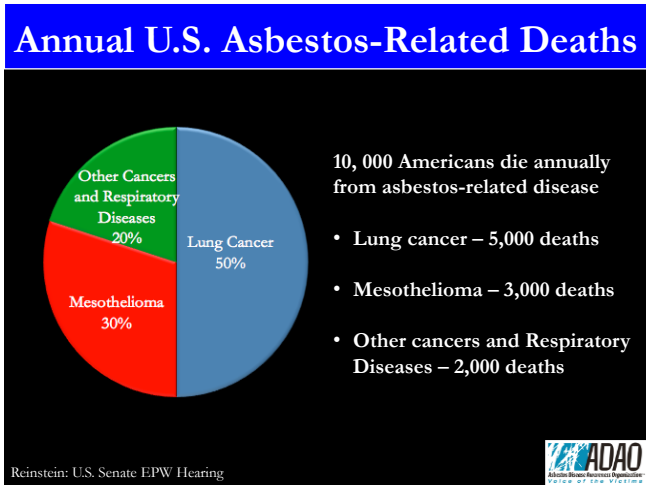

- The medical journal *The Lancet* reported that 9/11 first responders are now suffering from a variety of diseases and are 19% more likely to have cancer than other first responders. Due to the long latency period of asbestos-caused diseases, it will be decades before we can accurately calculate collateral damage from 9/11. [10]

- Right here under the Capitol, 10 federal employees were exposed and sickened from maintaining the tunnels. Asbestos dust was so thick that a worker was able to write his name on the pipe. One of their wives now has pleural thickening from washing her husband's contaminated clothes.

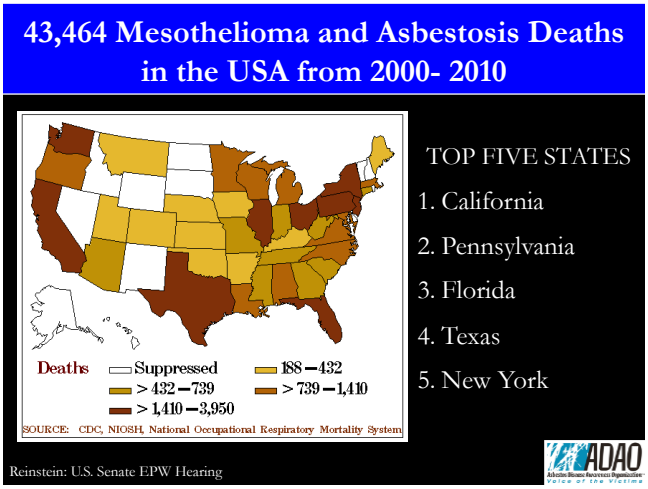

AMERICANS REMAIN AT RISK TODAY

Each year, an estimated 10,000 Americans die from asbestos-related disease. Many colleagues agree that this estimate is likely low due to underreporting and a focus limited to occupational surveillance. Annually, about 3,000 Americans die from mesothelioma, 5,000 from asbestos-related lung cancer, and 2,000 from other asbestos-related cancers or respiratory diseases.

[10] http://www.thelancet.com/themed-911

NIOSH statistics from 2000 – 2012 reveal that 43,464 Americans died from mesothelioma and asbestosis – just two of the asbestos-caused diseases. The top five states with the highest mortality were California, Pennsylvania, Florida, Texas, and New York.

The Occupational Safety and Health Administration states that in the United States, "Asbestos is well recognized as a health hazard and is highly regulated. An estimated 1.3 million employees in the construction and general industry face significant asbestos exposure on the job." In May 2010, the United States President's Cancer Panel (PCP) released the landmark 200-page report entitled, ***"Reducing Environmental Cancer Risk: What We Can Do Now"***[11]. The panel reported, "Construction workers were found to be 11 times more likely to develop mesothelioma, due to asbestos exposures at the site."

HISTORY IS A GREAT TEACHER TO THOSE WHO LISTEN

We cannot alter history or bring back the dead, but we can learn from the past to save lives. Every day, 30 Americans will die from preventable asbestos-caused diseases, yet asbestos continues to be legal and lethal in the United States. We know so much and have done so little to mitigate this disaster. Human, environmental, and civil rights have all been compromised because of asbestos, and patients like Janelle, Michael, and Alan pay the price.

The only two ways to end asbestos-caused diseases are prevention and a cure.

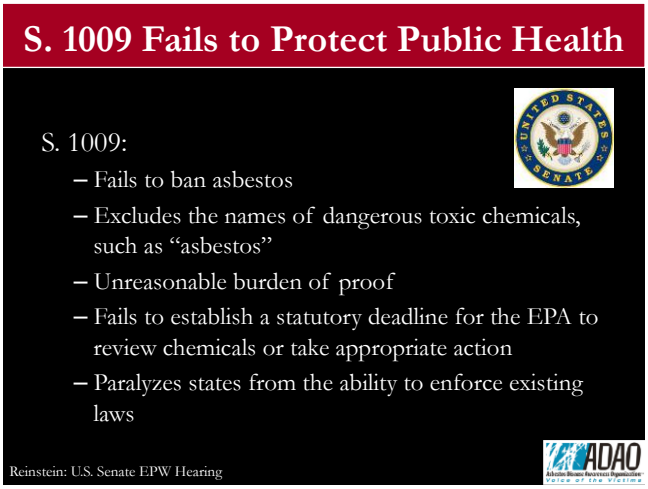

THE FIVE IRREFUTABLE ASBESTOS FACTS ARE:

1. Asbestos is a known human carcinogen and there is no safe level of exposure.
2. 54 countries have banned asbestos, but the United States has not.
3. Asbestos imports and exposure continue. In 2012, the United States imported over 1,060 tons of asbestos.
4. An estimated 10,000 Americans die each year from preventable asbestos-caused diseases.
5. Americans cannot determine or manage consumer, environmental, and occupational asbestos risk.

"SAFE CHEMICALS ACT OF 2013" (S. 1009) IS CRITICALLY FLAWED AND JEOPARDIZES PUBLIC HEALTH AND OUR ENVIRONMENT

In April 2013, ADAO applauded congressional efforts on the "Safe Chemicals Act of 2013" (S. 696)[12], which would adequately protect American families from toxic exposures. However, since then, CSIA, the Chemical Safety Improvement Act of 2013 (S. 1009)[13], was introduced in May. While the chemical industry is pleased with this new bill, ADAO and the majority of other environmental and public health organizations do not support the current language.

Specifically, CSIA has the following critical flaws:

- Next to Impossible to Phase Out or Ban Harmful Chemicals. CSIA would make it impossible for EPA to ban or phase out the worst of the worst toxic chemicals on the market.

- Grossly Inadequate Safety Standard. CSIA's safety standard would place a heavy burden on EPA to find that a chemical such as asbestos is unsafe, rather than shifting the burden to chemical companies to show chemicals are safe.

- Lack of Deadlines to Ensure Safety. CSIA is virtually devoid of any deadlines that would require EPA to act quickly to assess and restrict the use of harmful chemicals such as asbestos.

- Unworkable Standard of Court Review. CSIA would retain the unworkable standard of court review found in TSCA, which ultimately prevented EPA from being able to ban asbestos in 1989.

- Freeze on State Efforts to Protect People from Chemicals. CSIA contains far-reaching language that would paralyze states from being able to enforce existing laws or pass new ones, to increase protections against harmful chemicals such as asbestos.

Americans have lost confidence in the chemical industries' ability to protect us from toxins. Congress should draft and pass meaningful TSCA reform legislation that truly strengthens protections for our families and environment and expedites action to ban asbestos.

Americans need and deserve legislation to:

1. Expedite action to prohibit asbestos imports
2. Ban the manufacture, sale and export of asbestos-containing products
3. Protect each state's ability to maintain or pass stronger laws to regulate chemicals

I have attached to this testimony a petition signed by over 2,500 people who support a U.S. asbestos ban. One life lost to a preventable asbestos-caused disease is tragic; hundreds of thousands of lives lost is unconscionable.

S. 1009 Fails to Protect Public Health

S. 1009:

- Fails to ban asbestos
- Excludes the names of dangerous toxic chemicals, such as "asbestos"
- Unreasonable burden of proof
- Fails to establish a statutory deadline for the EPA to review chemicals or take appropriate action
- Paralyzes states from the ability to enforce existing laws

Asbestos Disease Awareness Organization™
Voice of the Victims

To:

The President of the United States
The U.S. Senate
The U.S. House of Representatives

Ban Asbestos, Save Lives. Sign the Petition to the United States Congress.

The World Health Organization, the International Agency for Research on Cancer, the United States Environmental Protection Agency, the United States Public Health Service and the U.S. Surgeon General agree: asbestos is a human carcinogen and there is no safe level of asbestos exposure. Asbestos-related diseases claim the lives of more than 10,000 Americans every year, and occupational, environmental, and consumer asbestos exposure continues. The facts are irrefutable, yet the United States has failed to ban asbestos and continues to import asbestos to manufacture asbestos-containing products, even though safe substitutes exist.

THEREFORE, we join with the Asbestos Disease Awareness Organization (ADAO) in urging Congress to:

- Expedite action to ban asbestos imports
- Ban the manufacture, sale and export of asbestos and asbestos-containing products
- Enforce existing Environmental Protection Agency (EPA), Consumer Product Safety Commission (CPSC), Occupational Safety and Health Administration (OSHA), and Mine Safety and Health Administration (MSHA) regulations designed to protect men, women, and children from asbestos exposure
- Direct research funding to the United States Department of Health and Human Services to identify those at risk for asbestos-related disease, develop better treatments, and find a cure

We, the undersigned, support the petition to urge the United States Congress to take immediate action to protect public health and ban asbestos.
